The Menace of Communism

The Sixth International Communist Congress held in Moscow this year declared its avowed policy "to concentrate Communist propaganda on the young people of the world," not on the young people of Russia, or even of Europe, but of the world.

Has that declaration any meaning for Canada? Is it one that the people of Canada need pay any attention to, or in regard to which they should take action?

Communism thrives where there is oppression, injustice, extreme poverty, lack of employment resulting in enforced idleness, and, inevitably arising from these conditions, general discontent. Stalin still finds mischief for his hands to do, and there is nothing quite so mischievous in the world today as Communism and its many pernicious doctrines.

Communism, therefore, found fertile ground in Russia owing to the centuries old oppression and injustices of the old Tsarist regime, during which the most abject poverty and ignorance continued among the masses of the people alongside an aristocracy rolling in wealth and indulging in all forms of extravagance and luxury. The added sufferings, sacrifices and losses of the Great War were all that was necessary to set the country adrift and provide the Communists with the opportunity they had long been awaiting.

In Canada, unlike Russia, there is no oppression of the people; injustice is not tolerated, and there is no enforced idleness, and, inevitably arising from these conditions, general discontent. Stalin still finds mischief for his hands to do, and there is nothing quite so mischievous in the world today as Communism and its many pernicious doctrines.

Communism, therefore, found fertile ground in Russia owing to the centuries old oppression and injustices of the old Tsarist regime, during which the most abject poverty and ignorance continued among the masses of the people alongside an aristocracy rolling in wealth and indulging in all forms of extravagance and luxury. The added sufferings, sacrifices and losses of the Great War were all that was necessary to set the country adrift and provide the Communists with the opportunity they had long been awaiting.

Oil Shale and Tar Sands

Vast Resources Located in Maritime and in Alberta

Canada has vast resources of oil shale and bituminous sands, the former occurring in Maritime Provinces, and the latter in Alberta. These deposits have long been considered as potential sources of products generally obtained from crude petroleum.

As a result of recent modifications in refining methods these raw materials may now be seriously considered as sources, to be drawn upon when needed, to help in supplying the rapidly increasing demand for motor fuel.

Canadian Arctic Expedition

Well On the Way To Frozen North, Equipped With Radio

An example of the use of Canadian products by the Canadian Government is the important scientific and exploration work comes with a report of the departure from Ottawa of the Canadian Arctic Expedition, organized by the Northwest and Yukon branch of the Canadian Department of the Interior.

The expedition was under the direction of Major L. T. Burwash, well known Canadian Government explorer, who has spent much time in the far North. Press reports this summer indicated that Major Burwash was one of the most of his military jaunts, but the general Canadian Arctic Expedition, according to information from Toronto, left that day in three parties.

All three parties were equipped with Eveready radio "B" batteries on the sets supplied for the expedition by that Department of Marine and Fisheries. Word has reached headquarters of the Canadian Department of the Interior that all branches of this Department are using Canadian National Carbon Company products.

Reports this summer on Major Burwash's activities indicate he was engaged in exploration of summer life interest which promises to yield also an abundance of romance. He planned a jaunt to the Yukon, a railroad, boat and dog team lading him at the magnetic pole, the trip being planned partly as a hunt for relics of the Arctic expedition of Sir John Franklin which ended in disaster in 1845.

Major Burwash also planned to investigate conditions among the Eskimos north of Mackenzie and Keeweenaw and the proposed railway route from Wagner Bay on the West Coast of Hudson Bay to Cockburn Bay south of King William Island.

One of the primary purposes for the expedition assigned by press reports is to determine the westward shift of the magnetic pole that "magnetic" charts may be corrected.

Work Done On H. B. Ry. Amazing

Road Bed Compared With Best Anywhere On Continent

Trains are rapidly springing up along the line of the new H. B. Ry. Railway where a year or so ago there was scrub, spruce and muskeg and along the railway a rusty engine truck which suggested nothing much as an abandoned enterprise. The volume of work which has been accomplished since reconstruction began is quite amazing.

While the road is still under construction, the emphasis is being placed on the road bed itself, and this is as far as mile 336 which is three-fifths of the way to Fort Churchill, is accomplished first, masonry of the railway building, and will compare with the best road beds anywhere on the continent.

It is 610 miles from The Pas to Churchill. Steel is at present laid mile 416. Passenger trains are running to mile 412, but the freight service terminal is at mile 426. While the road for the most part crosses muskeg on its way to the north, it should not for that reason be regarded as an unstable foundation.

The term "muskeg" should not be confused with "bog." Bogs occur at rare intervals along the route, and are always referred to as "mudholes." If the road passes through which it is necessary to dump into these places to make them passable, were visible the road would be ready to carry a heavy grade such as might be built across a prairie plain.

Muskeg is an accumulation of leaves, moss and mud, which occurs all over the North country up to the region of the barren lands. It may be a few inches or several feet in depth above its foundation of solid rock, and is present right to the very edge of the chasma through which northern rivers pass.

New stations are built all along the extended line. Clearwater Lake at mile 17 is rapidly becoming a summer resort. With the exception of the summer cottages at this point there is practically no building up to mile 36 is reached. Here there is a great deal of activity in quarrying the red marble, several carloads of which have been shipped out.

At Clearwater Lake, mile 42, the Dominion Government's Arctic force patrol is situated. This is an ideal place for an air-base and there are at present four "biplanes" operating from the point. There are several homesteads in this locality, and some noteworthy gardens have been visible from the railways during the summer months. There is a public school in operation, and as there is a thriving little business community at the place is blossoming quite a popular summer resort, the residents are looking for a prosperous future.

Method Devised Legal
Selling for slaves is a new method of transacting business, introduced by two brothers at Marquette, Iowa. They have sold eighty acres of land in Minnesota to a Moravia farmer for 1,000 dollars, and the farmer will exercise his territorial art free up to the two brothers at their demand, until the debt is liquidated. The transaction was duly legalized.

Ten Boring Costly
A campaign has been started at Neigh, Nebraska, to raise money for a surgical operation upon Nebraska's oldest son free that was struck by lightning. The tree is 160 years old. It will require \$400 to give the tree proper care and prevent its dying, experts said.

Not C.P.R. Line Launched
The new Canadian Pacific line, "Duchess of York" was launched at Clydebank, Scotland, on September 28th, by Her Royal Highness the Duchess of York. H.R.H. the Duke of York and other members of the royal family were present. The vessel is of 20,000 tonnage.

Man's Cup of Joy
A man's cup of joy resembles an after-dinner coffee cup, but his cup of sorrow holds several gallons.

Possesses Valuable Secret

Scientist Studying Whale's Ability To Breathe Under Water An Hour

To open the way for the discovery of all appliances that will enable man to remain under water and survive, Dr. A. Brander Howell, anatomist, who has just joined the Faculty of Johns Hopkins University, is making a study of the whale.

The whale possesses a secret which, if it could be comprehended, might be of incalculable benefit to man. That is the method of disposing of the carbon dioxide which its generator in his blood during long periods under water, sometimes exceeding an hour. Some chemical adjustment takes place in his body which makes it possible for him to consume his own poisons or dispose of them. An understanding of this process, Dr. Howell explained, might lead to the invention of an appliance which would have a definite bearing on submarine and mine disasters and the rescue of rescue.

If the chemical formulae by which the whale "consumes" his own poisons, so to speak, could be found, Dr. Howell asserted, science might be able to reproduce the condition in the human body. That is only one reason why he has turned Dr. Howell to studying the whale, which, he says, is the only animal on earth which can stand the water pressure at the depth of a mile.

Worked Under Difficulties

Ontario Government Commenced Met With Opposition In Some Counties

J. G. Rutherford, Ontario government commissioner, who is home after a tour of inspection to seven months, took his machine to places where movie men have never before worked. The Mount of Gibraltar was visited, because it was against their religion to be photographed. At several places were made to record the views of the fishermen, but the ruler's objections were found too strenuous, while the Dutch government would not permit the photographing of "shoos" the great islands there. It is reported that the provincial government will use Rutherford's unique notes to aid the teaching of geography in schools of the province.

Northern Development

Edmonton Head Of Trade Taking An Interest In This Important Work

Violating his support of a Northern Alberta development council, John Reid, secretary of the Edmonton Board of Trade, stated recently that "Every citizen of Edmonton and the northern territory is naturally in favor of developing the lands and natural resources of our great northland."

The north is worthy of all our best efforts, and in the formation of the proposed council the details should be taken care of. Not only will the same time the general idea is good and it should appeal to Edmonton as well as to the northern towns and settlers in that country."

Deferred Payment
The road was slippery and the motorist's brakes refused to hold the car. He skidded wildly across the pavement and knocked a man off his feet.

Fortunately, the man was not badly hurt, and the motorist, driving his car, produced five shillings. "Here you are," he said. "Give me your address and I'll send you some more."

The man looked up with an injured air. "Look here, guv'nor," he said bitterly. "You don't think you can run me down on the installment plan, do you?"

Nurse Did Not Work
Anne Elizabeth had a lover who had been courting her for 15 years, in the tradition of her father, who thought "it was time things were moving."

At his instigation the girl put up a few questions. "Don't you like him, it's time you and me were thinking about getting wed?"

"Ah," agreed her main, heartily. "but who has we?"

Just Maude
"Name this child," said the minister, preparing to baptize the twins. The proud father threw out his arms. "George Thaddeus and Andrew John Lincoln Carnegie Jones."

The minister gaped. And the other? The meek, nervous mother in a scarcely audible voice answered: "Maude."

ONLY WOMAN PASSENGER

Lady Grace Drummond Her, English society woman and writer, was the only woman passenger aboard the dirigible, "Graf Zeppelin," when it started on its trans-Atlantic voyage from Friedrichshafen, Germany, to Lakehurst, New York. The other passengers were for \$4,000 a seat.

Lady Grace Drummond Her, English society woman and writer, was the only woman passenger aboard the dirigible, "Graf Zeppelin," when it started on its trans-Atlantic voyage from Friedrichshafen, Germany, to Lakehurst, New York. The other passengers were for \$4,000 a seat.

Wintering Surplus Queens

Method Used To Bring Surplus Queens Through Winter Without Loss

When the beekeeper finds that he has a surplus of queens in the fall of the year, the question arises as to how he may winter these without loss. At the Experimental Station, at Frederick, New Brunswick, the following method for saving extra queens was tried. Four weak colonies were selected for the experiment. Five of the lightest combs were removed from each colony and the bees shaken back into the hive. The remaining five combs were placed in one side of the hive. The following day a light division board was placed in two of the colonies and the bees and brood, and queens from the two remaining colonies were placed one in each of the divided hives. Two weak colonies with queens were then brought together in one hive. Separate entrances were provided at the corners of the hives and an old cloth was tacked to the division board beneath the cover and over the frames. These colonies were wintered in the latter.

Both queens came through the winter in good condition in one hive, but in the other only one of the queens survived.

Giant Herd Of Caribou

Immense Herd Of Canadian Northland Are Moving South

The caribou herds of the great Canadian northland are moving south by the tens of thousands. It is estimated that a giant herd of these magnificent animals is approaching Hudson's Bay Junction, the most northerly point which they have reached for over 20 years.

It is good news for the hundreds of big game hunters from both eastern Canada and the United States, who are anxiously awaiting November 15, for the famous Canadian shooting season to open. Not only will caribou be good shooting in the vicinity of Hudson's Bay Junction this year, but moose and deer are also exceptionally plentiful, according to information received by the Saskatchewan Provincial Department of Wild Game.

This is a closed season for elk, although they were hunted in great numbers north of Prince Albert, Sask., last year. Hundreds of these pretty animals are expected to flock to Hudson's Bay Junction in the park, where they will find protection from the guns of big game hunters the year round.

Boats and Men
Boats have holes; no have men. Boats sometimes get tight; no do men.

Poor boats are run over; no are men. Boats will sink if polished; no will a man.

Some boats are imitation calf; no are men. Boats are lanned; no are men in their youth.

Some boats can't stand much; neither can some men. A book to be of much account must have a hole; so must a man.

A head without a crown always feels comfortable; so does a man. Why should he?

A landlady wrote to his tenant: "Dear Sir,—I regret to inform you that my rent is much overdue. Will you kindly forward me a cheque?"

Back came the reply: "Dear Madam, you are no reason on earth why I should pay your rent. I can't pay my rent."

Sees Regular Dirigible Service

Commander Eckener Of Graf Zeppelin In Vision of the Future

A regular dirigible service between Europe and the United States within four years, with sailings from both sides of the Atlantic every four or five days, was visualized by Dr. Hugo Eckener, commander of the Graf Zeppelin.

At least four giant ships will be necessary before the service can be inaugurated, Dr. Eckener explained. The ships will be larger and more powerful than the Graf Zeppelin. It will also be necessary to build two dirigible cross winds which are frequent over New Jersey. The European terminal, he said, probably will be located on the Rhine Valley near Basel, as Friedrichshafen from where the Graf Zeppelin started its trans-Atlantic flight, is too high.

A capital of at least \$10,000,000 will be necessary for the construction of the four dirigibles and the two cross winds. The cost of building the cost of each ship will be about \$1,500,000, if built in Germany. If some of the ships are built in the United States, the cost would be higher, due to higher labor charges.

Gains Made By Calves

Weighting Calves At Three-months Interval To Record Increase In Weight

Four cattle raisers take the trouble to weigh their calves from month to month to ascertain the gain they are making. The Experiment Station, at Sidney, B.C., have weighed calves at three-month intervals during a period of two years. The calves were of dairy breeding and eight of them were weighed until they were six months old, six of them until nine months, five until a year old, and two until twenty-four months of age had been reached. The calves at birth averaged 55.5 pounds; the average gain for the first three months was 16.7; for the second three months 14.2; for the third 14.6; for the fourth 10.5 pounds; for the fifth 11.3; for the sixth 10.5; for the seventh 10.5; for the eighth 10.5; for the ninth 10.5; for the tenth 10.5.

These calves were weighed at three-month intervals during a period of two years. PROMOTED

MR. ALBERT WILCOX

who was recently promoted to the position of assistant to the general manager, western region, Canadian National Railway. Mr. Wilcox, who was general superintendent of transportation, is a well known figure throughout the west.

The Impulse Of Habit

Business Men In The Bone Sheds Less Attraction

A short time ago a horse fell into the docks at New York. It was old and blind, and not only could not see where to clamber out, but evaded capture.

For years it had amiled along leading an ice wagon. But the driver realized that in its heyday Dobbin had been in the New York City fire department, believing that the firemen retained an affection for him.

The horse was blind, the engine clattered along. The astute fireman halted near a spot where it would be certain for the horse to reach dry land, and, setting the fire-brake, clattered with all the power they could muster, and the joy of ending a long and hard day.

At last the horse was saved, and with all haste for the direction from whence the sound came. A few moments later the horse was safely ashore, taken to his stable and wrapped in warm blankets.

We humans are pretty much like that old horse. We may retire from business, or we may quit and go into another line, but the salt of the blood asserts itself until the end.

The farmer who goes to live in the city is never so happy as when he is out in the garden, raising a few vegetables; in his man who has run a certain number of years renews his youth when he hears it hum and he wishes to nudge about with it again; he retires newspaperman who has printed his ink instead of blood in his veins, picks up his ears at the old familiar sound of the press.

The impulse of habit is sometimes stronger than the weakness of the flesh.

Actions Repeat Themselves

Expressed In Different Ways Among Peoples

Certain actions are repeated in different ways among peoples. "What are you here for?" he asked. "To report anything unusual, sir?" "What would you call unusual?" "I dunno exactly, sir."

"What would you do if you saw five battlehips steaming across the night?" "Sign the pledge, sir."

Made Nasty War Birds

Saskatchewan Is Made safer for Indians and other natives by the sudden depletion in the crane population this summer by some birds approaching 20,000 as a result of the injudicious crows competition.

More than 4,000 individuals entered the contest, in which \$2,500 was offered in 1,500 cash prizes, ranging from \$100 to one dollar.

Trade With South Africa

Feared Through Canada by Stage, en route to Peru, G. R. Mackenzie, Canadian Trade Commissioner in South Africa, said that Canadian trade with South Africa is steadily extending and that at present some 400 Canadian firms are exporting to that part of the world.

Interviewer With Big Business Man

"I have called to learn the secret of your unparalleled success."

"Big Business Man: 'Just one moment, please. Are you from the American Magazine or the District Association's office?'"

Investigation In Arctic Completed

Danish Explorers Will Submit Report On Hottest Positioning

Covering 14,000 miles of Arctic trails with dogs, canoes and horses during the two years that they were making a trail across the barren lands, the brothers A. E. and R. T. Forssell arrived from Waterbury, thus completing the two-year investigation taking for the federal government in the chance of establishing a reindeer industry in the Northland.

It is another triumph for the Viking breed that gave Stefansson and Amundsen to the world, for the two young men are Danes. They were educated at Copenhagen University and their father is now in charge of the Danish Arctic station—a scientific observatory at Godhavn, Greenland.

With them, the young explorers brought out 1,000 potato, 15,000 botanical specimens and many geologic specimens. Forssell declined, however, to give for publication the conclusions reached by them as to the possibility of establishing reindeer industry in the Northland.

The Dominion Government will be the first to see their report. It is expected that the Forssells commented on the herds of the Lommen Brothers in Northwest Alaska, where Forssell Brothers saw a roundup of 100,000 Arctic station—a scientific observatory at Godhavn, Greenland.

Shipment Of Australian Oranges. A despatch to the Mail and Empire from Vancouver, says: "Marking a new departure in Inter-Empire trade, the first consignment of Valencia oranges to reach this country from Western Australia passed through the port of Vancouver. A full carload of the fruit was shipped in Winnipeg. The Australian product will compete with oranges from California and will probably form the first of a continuous flow of the fruit from the antipodes to Canada."

Professor Offers Proof

Produces Calculations To Prove Earth Is Rotating Faster Than It Is

Calculations showing that the earth is continuing to rotate faster than its regular speed of 24 hours per day were presented to the American Association of Variable Star Observers in annual convention at Cambridge, Mass.

The interest to many people in the calculations lies in their possible application to the study of earthquakes, rather than to any appreciable change in the length of the day. The cause of the faster speed is suspected to be the contracting of the earth's crust.

The calculations were presented by Ernest W. Brown, Hartford, professor of mathematics at Yale University.

New York Buys B.C. Apples

Of the British Columbia apple crop harvested in the Okanagan Valley it is expected that 150 carloads will go direct to New York, although the principal market will be in the Pacific Northwest of Canada, estimate of the crop is given at 1,250,000 boxes from the Okanagan and Kootenay districts. The apples are of fair quality, and the yield is the best in years.

Had Every Night

A woman pushed her way rudely through the crowd, gazing with admiration at the bearded lady at the country fair.

"Here, I say," said a man. "Be careful. What right have you to go rummaging through my pockets?"

"Every right," was the haughty reply. "I'm his wife."

Mrs. White: Have you ever been to a predicament, Mrs. Green?

Mrs. G. Why—not? I don't think I have. Mrs. White: Is it a predicament or a humbug?

AT THE RACES

"Why do you put my numbers on the backs of the runners. They never accept a valid order."—Journal, Ammanut, Paris.

Sees Regular Dirigible Service

Commander Eckener Of Graf Zeppelin In Vision of the Future

A regular dirigible service between Europe and the United States within four years, with sailings from both sides of the Atlantic every four or five days, was visualized by Dr. Hugo Eckener, commander of the Graf Zeppelin.

At least four giant ships will be necessary before the service can be inaugurated, Dr. Eckener explained. The ships will be larger and more powerful than the Graf Zeppelin. It will also be necessary to build two dirigible cross winds which are frequent over New Jersey. The European terminal, he said, probably will be located on the Rhine Valley near Basel, as Friedrichshafen from where the Graf Zeppelin started its trans-Atlantic flight, is too high.

A capital of at least \$10,000,000 will be necessary for the construction of the four dirigibles and the two cross winds. The cost of building the cost of each ship will be about \$1,500,000, if built in Germany. If some of the ships are built in the United States, the cost would be higher, due to higher labor charges.

Gains Made By Calves

Weighting Calves At Three-months Interval To Record Increase In Weight

Four cattle raisers take the trouble to weigh their calves from month to month to ascertain the gain they are making. The Experiment Station, at Sidney, B.C., have weighed calves at three-month intervals during a period of two years. The calves were of dairy breeding and eight of them were weighed until they were six months old, six of them until nine months, five until a year old, and two until twenty-four months of age had been reached. The calves at birth averaged 55.5 pounds; the average gain for the first three months was 16.7; for the second three months 14.2; for the third 14.6; for the fourth 10.5 pounds; for the fifth 11.3; for the sixth 10.5; for the seventh 10.5; for the eighth 10.5; for the ninth 10.5; for the tenth 10.5.

These calves were weighed at three-month intervals during a period of two years. The calves were of dairy breeding and eight of them were weighed until they were six months old, six of them until nine months, five until a year old, and two until twenty-four months of age had been reached. The calves at birth averaged 55.5 pounds; the average gain for the first three months was 16.7; for the second three months 14.2; for the third 14.6; for the fourth 10.5 pounds; for the fifth 11.3; for the sixth 10.5; for the seventh 10.5; for the eighth 10.5; for the ninth 10.5; for the tenth 10.5.
